# 1 Function Requirements

## 1.1 Assumptions

The Standard Deviation function will accept an array  $X$  of input numbers. Each of these values  $x_i$  can either be a negative number, positive number, decimal number or a zero.

## 1.2 Requirements

The current section describes the requirements to implement the Standard Deviation,  $\sigma$  function.

### Requirement Id : R1

<b>Overview</b>	If $X = [0]$ in the $\sigma$ function
<b>Description</b>	If the user gives 0 as input, the function will return 0 as output.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestInputZero

### Requirement Id : R2

<b>Overview</b>	$X = [\text{Single real number}]$ in to the $\sigma$ function
<b>Description</b>	If the user gives only one number as input, the function will return 0 as output.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestSingleNumber

### Requirement Id : R3

<b>Overview</b>	X = [Array of same real numbers] in the $\sigma$ function
<b>Description</b>	If the user gives X = an array of same values as input, the function will return a 0 value as output.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestSameNumbers

#### Requirement Id : R4

<b>Overview</b>	X = [Array of negative real numbers] in the $\sigma$ function
<b>Description</b>	If the user gives X = an array of negative values as input, the function will return a positive real value as output.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestNegativeNumbers

#### Requirement Id : R5

<b>Overview</b>	X = [Array of positive real numbers] in the $\sigma$ function
<b>Description</b>	If the user gives X = an array of positive values as input, the function will return a positive real number as output.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestPositiveNumbers

#### Requirement Id : R6

<b>Overview</b>	$X = [\text{Array of decimal numbers}]$ in the $\sigma$ function
<b>Description</b>	If the user gives $X =$ an array of decimal values as input, the function will return a positive real value as output.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestDecimalNumbers

#### Requirement Id : R7

<b>Overview</b>	$x =$ a real number in the $\sqrt{x}$ function
<b>Description</b>	If $x$ , a number is passed as input to our square root function, it will return the precise square root value.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestSquareRoot

#### Requirement Id : R8

<b>Overview</b>	$x =$ real number as base, $y =$ real number as exponent in the $x^y$ function
<b>Description</b>	If $x, y$ , a base and exponent number is passed as input to our power function, it will return the precise power value as result.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestPower

#### Requirement Id : R9

<b>Overview</b>	x = a char or string in Eternity.numericInputCheck(x) function
<b>Description</b>	If x is passed as a string input to our numericInputCheck() function, it will return false as result.
<b>Priority</b>	High
<b>Type</b>	Functional
<b>Difficulty</b>	Medium
<b>Version</b>	1.0
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestInputisNumber

#### **Requirement Id : R10**

<b>Overview</b>	Availability
<b>Description</b>	The system may provide the calculation to the user within finite time.
<b>Priority</b>	High
<b>Type</b>	Non-Functional
<b>Difficulty</b>	Medium
<b>Owner</b>	Prathika Anup Suvarna
<b>Verification Method</b>	F8_TestAvailability
